

DOES YOUR ATTIC NEED MORE INSULATION?

Your home's attic insulation might not be the first thing you think of when it comes to energy savings and home comfort, but it can have a significant impact on both. Unfortunately, many homes throughout the Lawton area aren't sufficiently insulated — is yours?

SIGNS YOUR HOME NEEDS ATTIC INSULATION UPGRADES

If you've been experiencing any of these symptoms, give the team of insulation experts at Pippin Brothers a call.

ICE DAMS

Icicles on your home's gutters every winter could be a sign that heat is escaping from your roof and attic insulation is needed.

INCONSISTENT TEMPERATURES

Without proper insulation, your HVAC system will have a difficult time keeping up with your thermostat settings.

MOISTURE INTRUSION

When your home is underinsulated, it becomes vulnerable to moisture, which can accumulate in your attic and lead to mildew and mold growth.

HIGH ENERGY BILLS

Insulation plays a big role in your home's energy efficiency and without it, your energy bills could be affected.

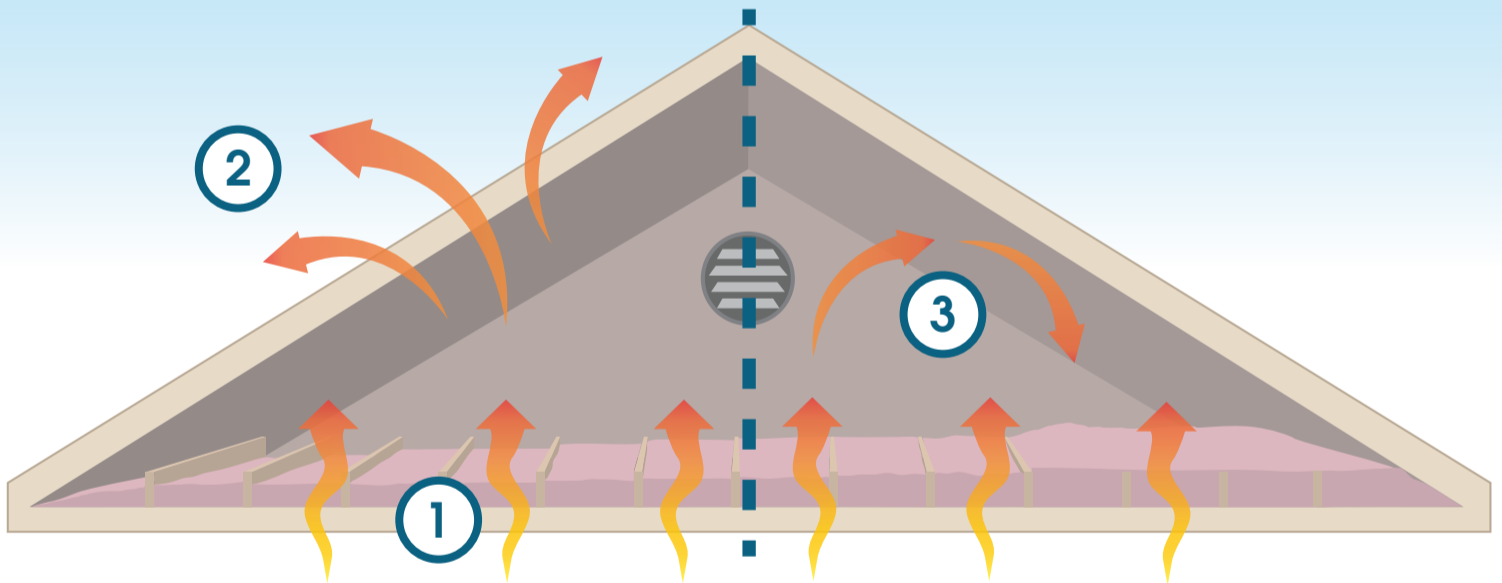

HOW INSULATION WORKS

Insulation creates an added layer of protection between your home and the outside elements. This not only keeps your heated and cooled air inside where it belongs by stopping heat flow but also reduces unnecessary wear and tear on your HVAC system.

1 Heat in your home naturally rises

2 If the attic is under-insulated, heat escapes straight through the roof

3 If the attic is well insulated, heat stays in your living spaces

BENEFITS OF ATTIC INSULATION

Attic insulation, especially when combined with air sealing, can provide many benefits to your whole home such as comfort, health, and efficiency.

A MORE COMFORTABLE HOME

FEWER INDOOR DRAFTS

IMPROVED INDOOR AIR QUALITY

REDUCED RISK OF PESTS

LOWER ENERGY BILLS

NOISE REDUCTION

The best way to discover if your home's attic is underinsulated is with an energy audit with our team of experts. Schedule your energy audit with Pippin Brothers today.
